

Enterprise Solutions For Hospitals

mEnterprise Mobile Application

mEnterprise is a mobile application that brings a subset of features from a messaging service portal right to the care provider's tablet or smartphone. It is a quick reference solution for viewing system generated notifications, upcoming meetings, organizational events, laboratory results, message inbox and document viewer.

A HANDY HEALTHCARE TOOL WITH GREAT FEATURES

Notifications - This module displays a list of all the system generated notifications. The snapshot view of each notification displays the event date and time along with a quick overview. You can click on each notification to view complete details.

Meetings - Contains a standard calendar list view of upcoming and past meetings. Clicking on each meeting instance displays the complete meeting details including attached documents and recurrence pattern.

Document Viewer - Any documents uploaded and available to the User through a central notification portal is displayed here. A user can view as well as download the documents through this module.

Events - See complete list of organization wide events on the app screen. A calendar view of each event displays Title, Time, Date and a description snippet.

Messaging - A message viewing interface designed as a standard inbox is available to the User for viewing new incoming messages.

KPI Monitor - Indicates the current values, targets and norms for the KPIs selected and helps the management and providers to keep a close watch on the hospital matrices. The indicators could be charts or graphs. The data for the KPIs are fetched from a BI system.

Lab Results - All lab results available to the user are displayed here. Each reported instance displays the generation Date, Time and Description of the report.

KEY BENEFITS

Mobile applications are favorable new tools for health care. An even more exciting trend, are apps designed for doctor-to-patient relationships. Here are just few of the key benefits in which mEnterprise can streamline your health care workflow:

- o Secure mobile environment ensuring confidentiality
- o Save time & costs on administrative tasks
- o Access to detailed patient information
- o Notification/alerts to various critical events
- o Builds patient loyalty
